DATE: 03-08-2022

EXPERIMENT 3

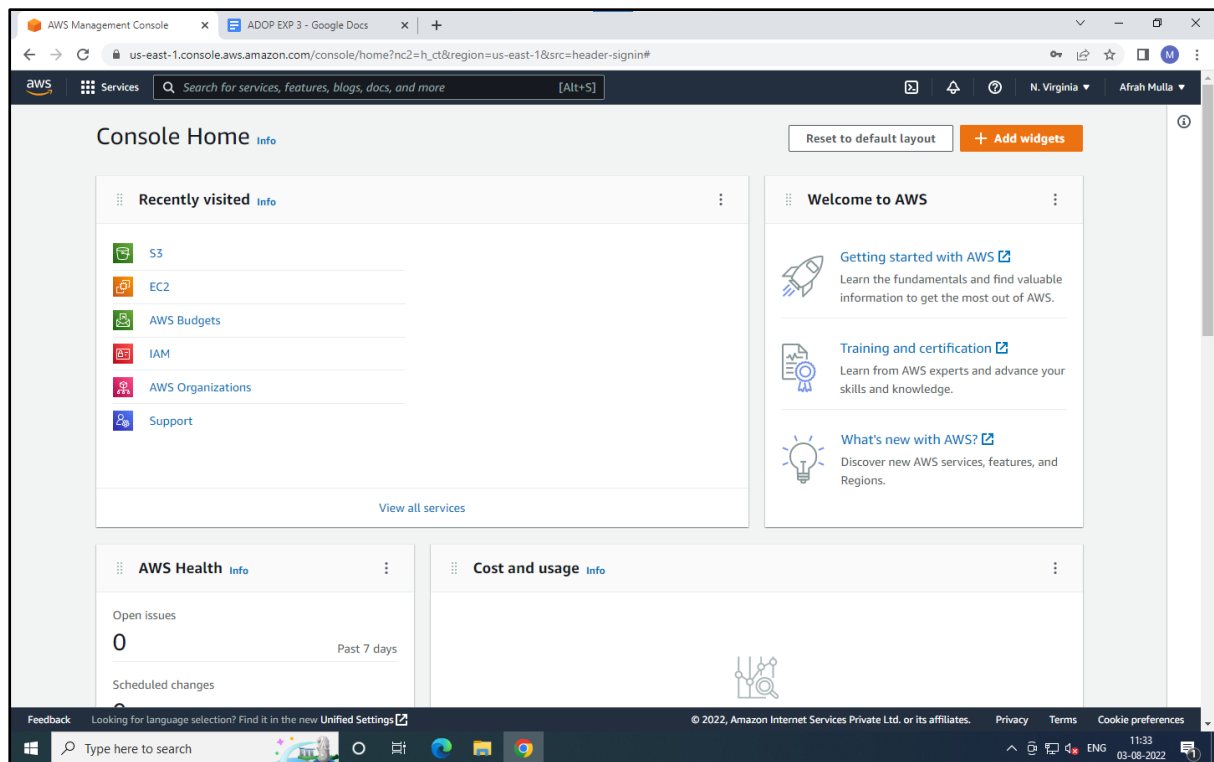

What is AWS Cloud9? Features of AWS Cloud9

AWS Cloud9 is a cloud-based integrated development environment (IDE) that lets you to write, run, and debug code from any machine with just a browser. The Cloud9 IDE provides the software and tooling needed for dynamic programming languages including JavaScript, Python, PHP, Ruby, Go, and C++. This means you no longer have to spend the time to install programs or configure your development machine.

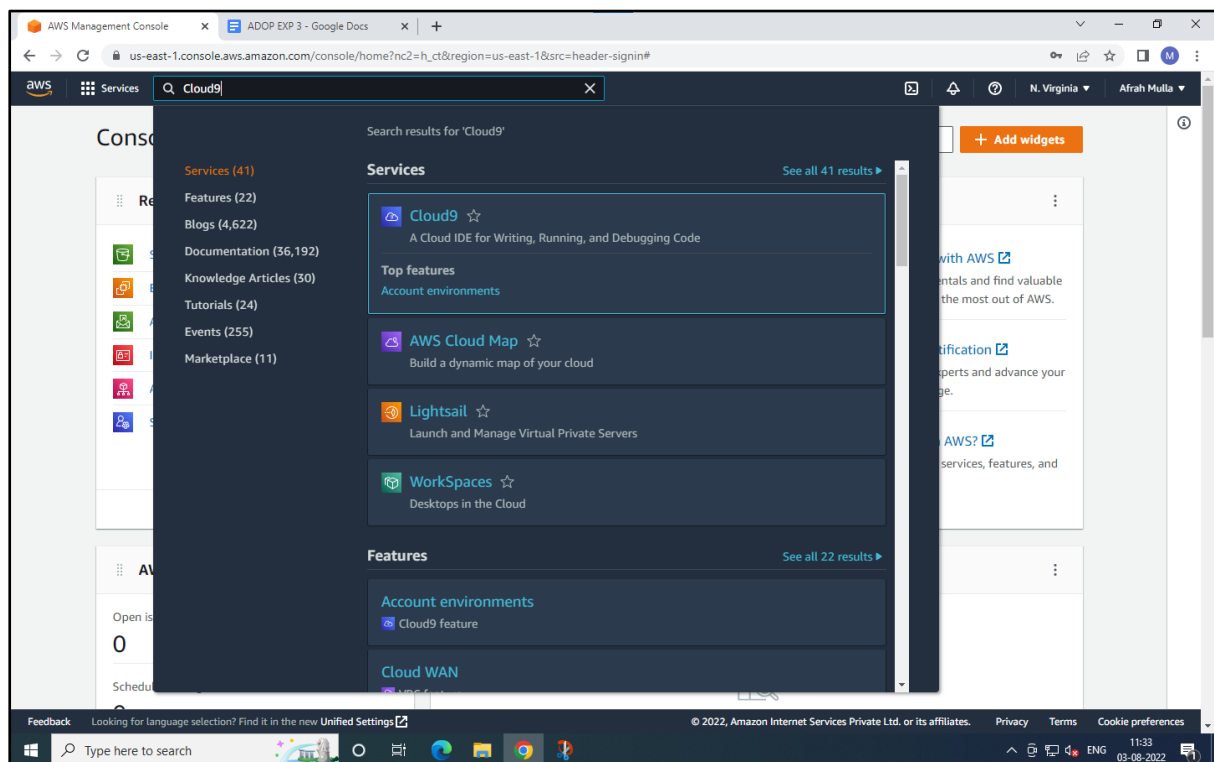

Features of AWS Cloud9 are –

- Fully-featured Editor
- Broad Selection of Run Configurations
- Integrated Debugger
- Integrated Tools for Serverless Development
- Connectivity to Any Linux Server Platform
- Built-in Terminal
- Collaborative Editing and Chat
- Continuous Delivery Toolchain
- File Revision History
- Themes
- Keyboard Shortcuts
- Built-in Image Editor

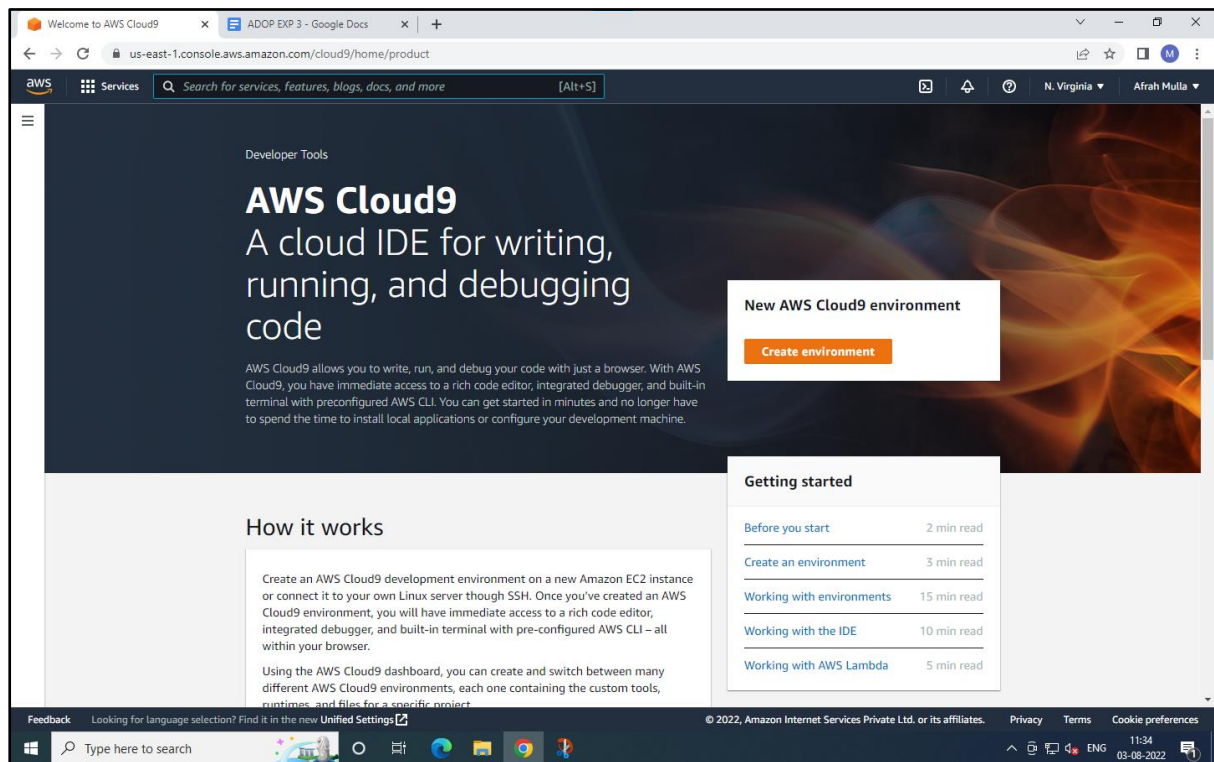

Step 1: AWS Management Console Dashboard

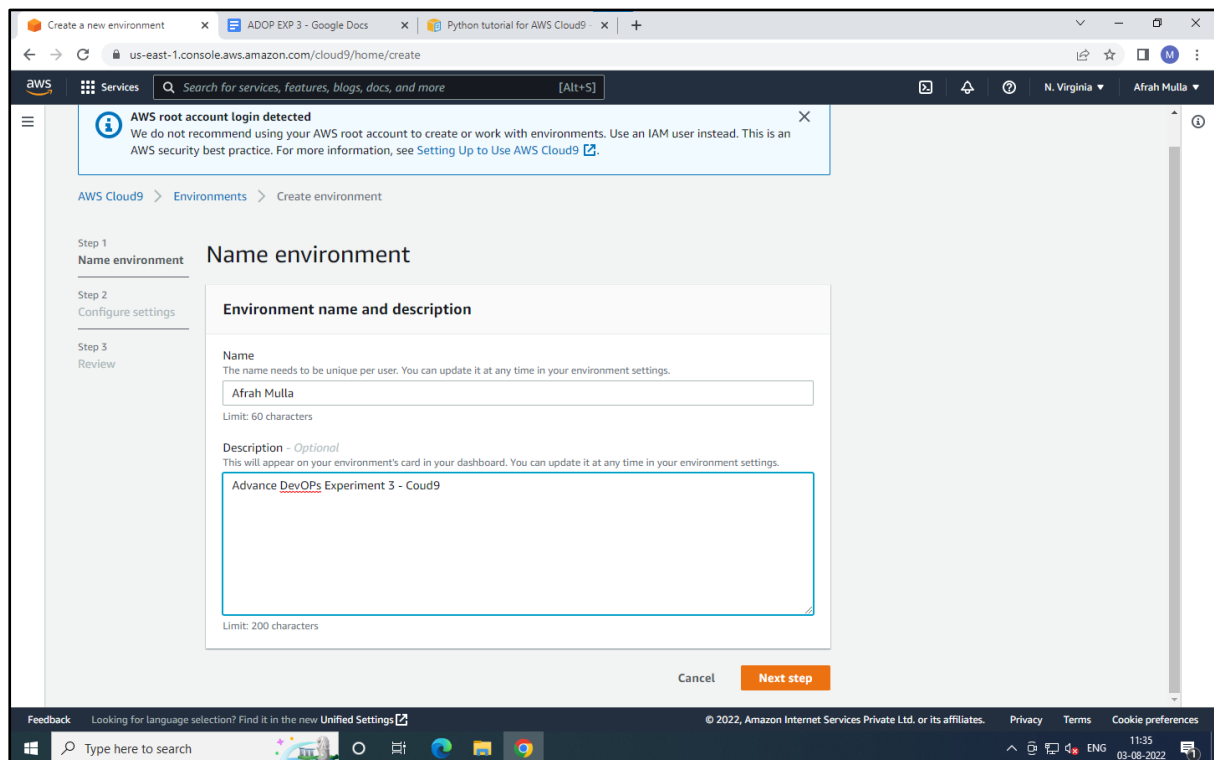

Step 2: Search for Cloud9 and select it

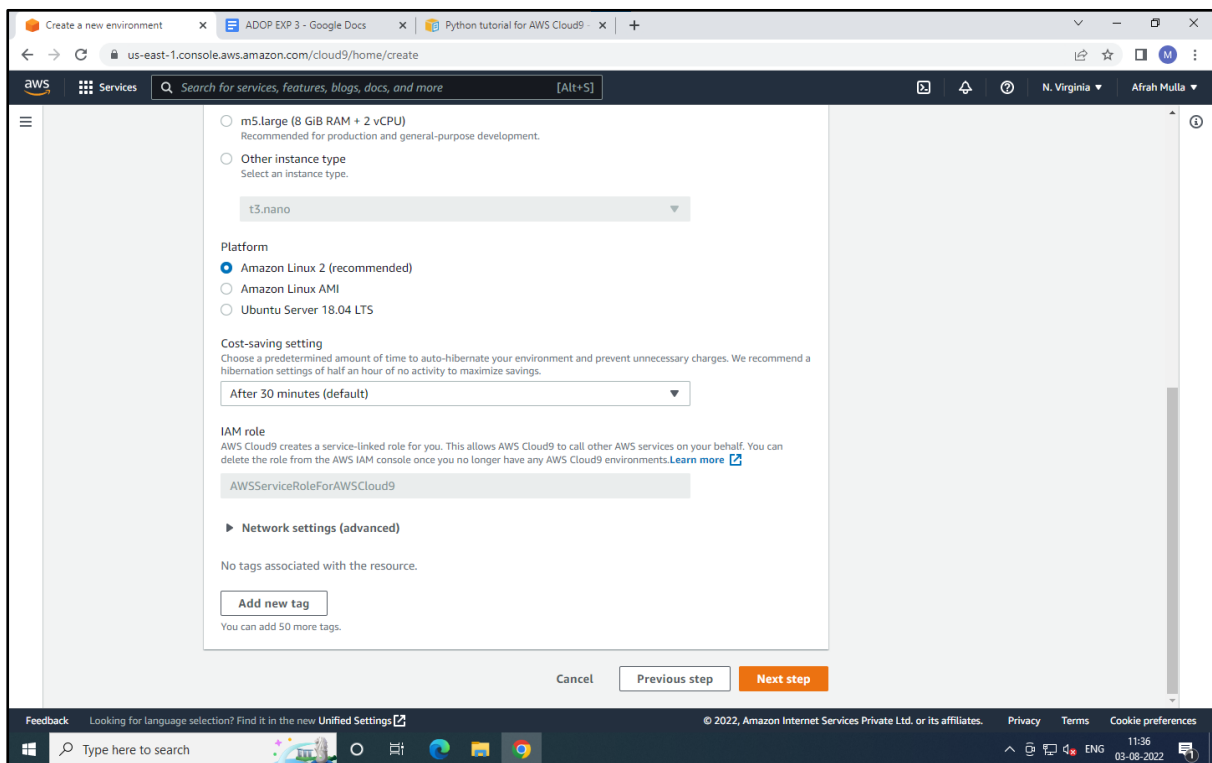

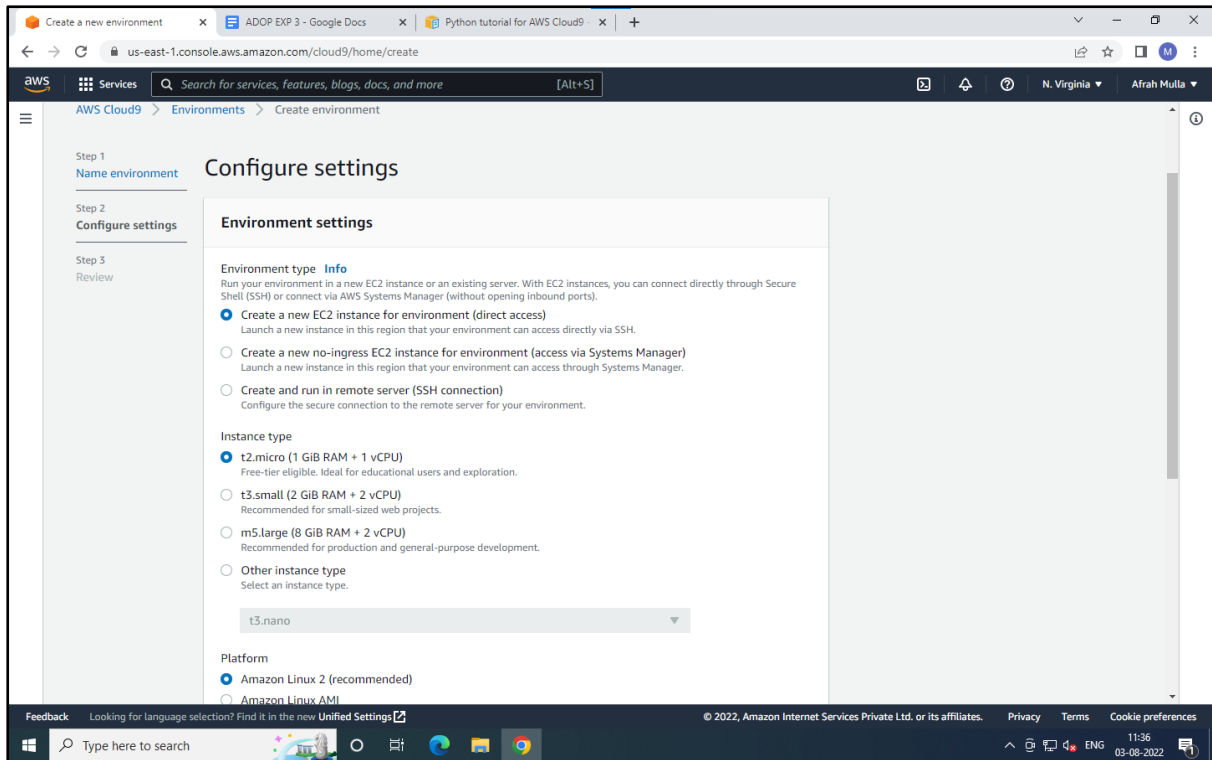

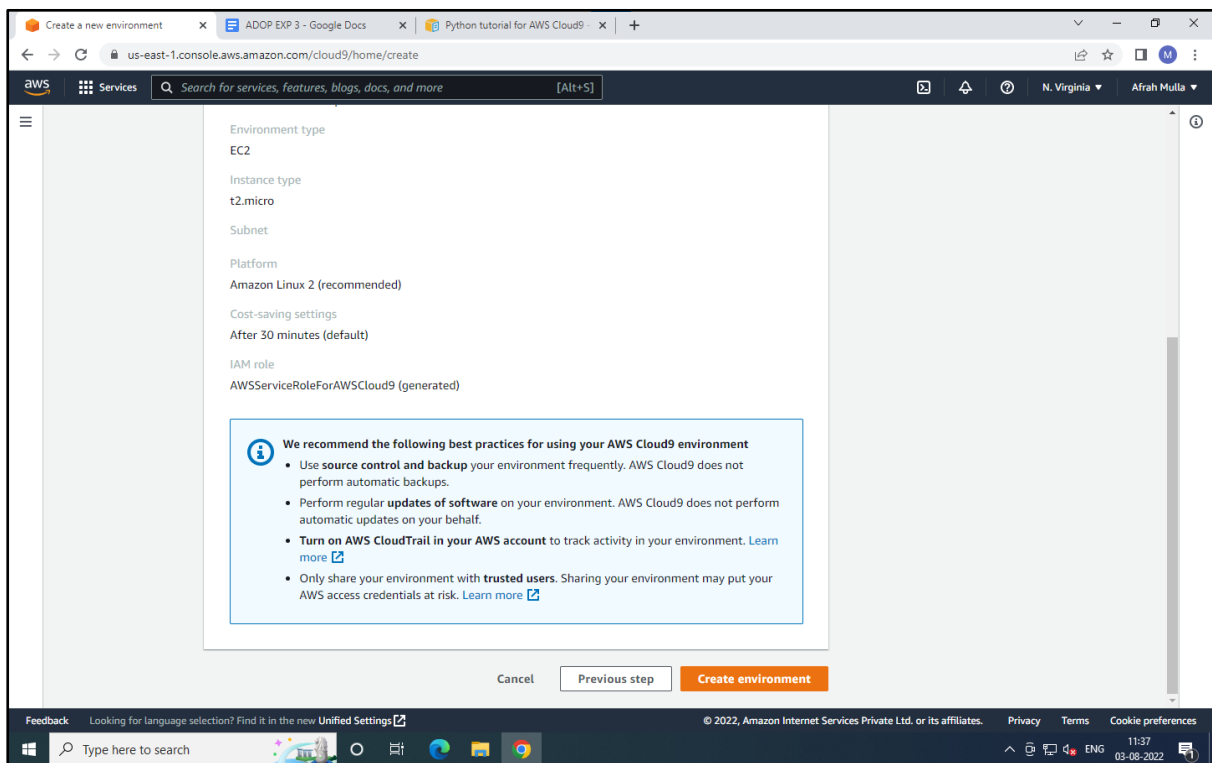

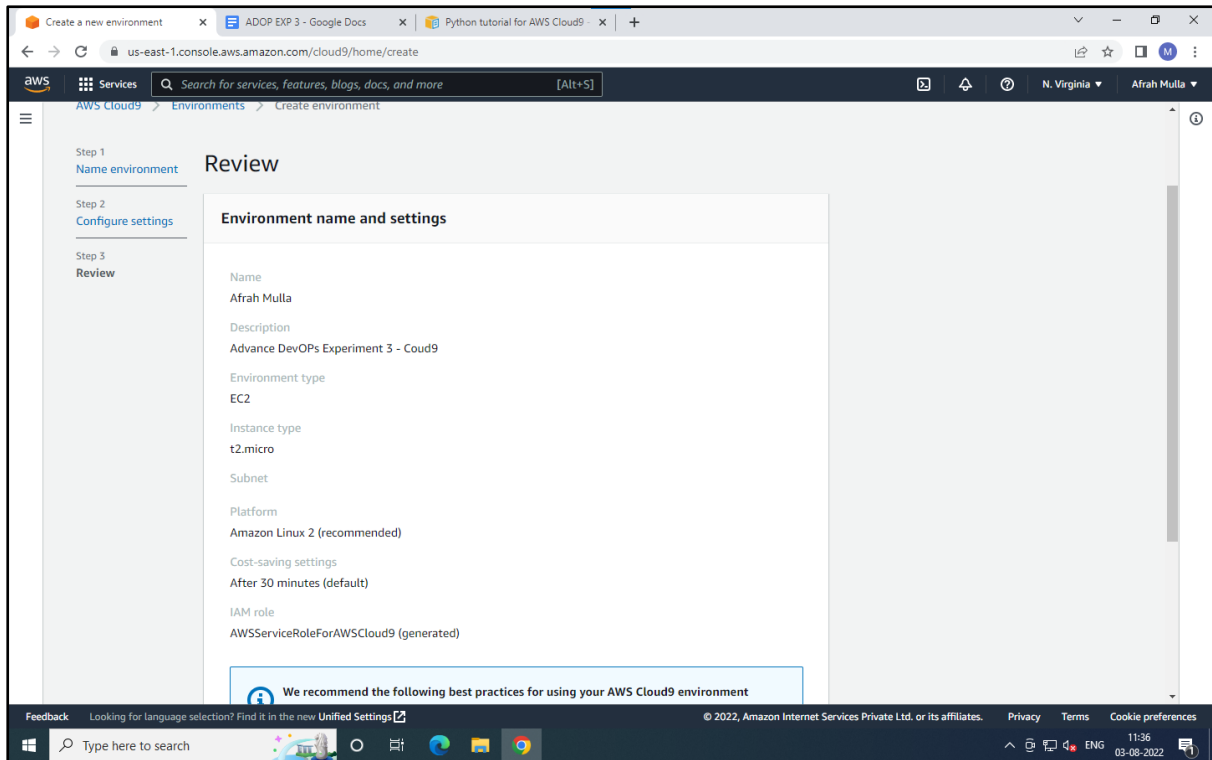

Step 3: Click on 'Create environment'

Step 4: Name your environment and configure the settings

For Python

Step 1: Install Python.

Run the yum update for Amazon Linux to help ensure the latest security updates and bug fixes are installed:

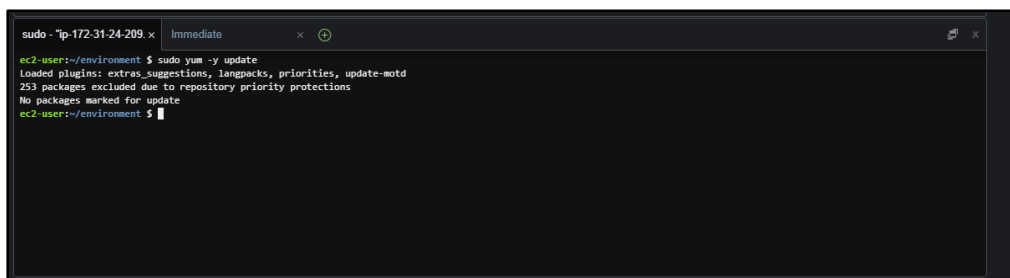

```
sudo yum -y update
```

Install Python by running the install command.

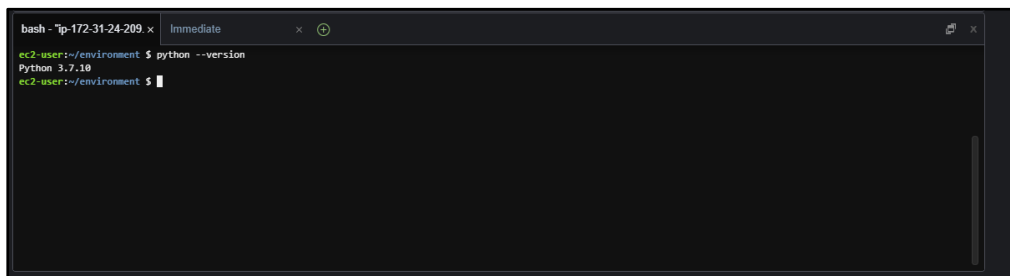

For Amazon Linux: `sudo yum -y install python3`

Here, python is already installed so we will check the python version by running the following command:

```
python --version
```

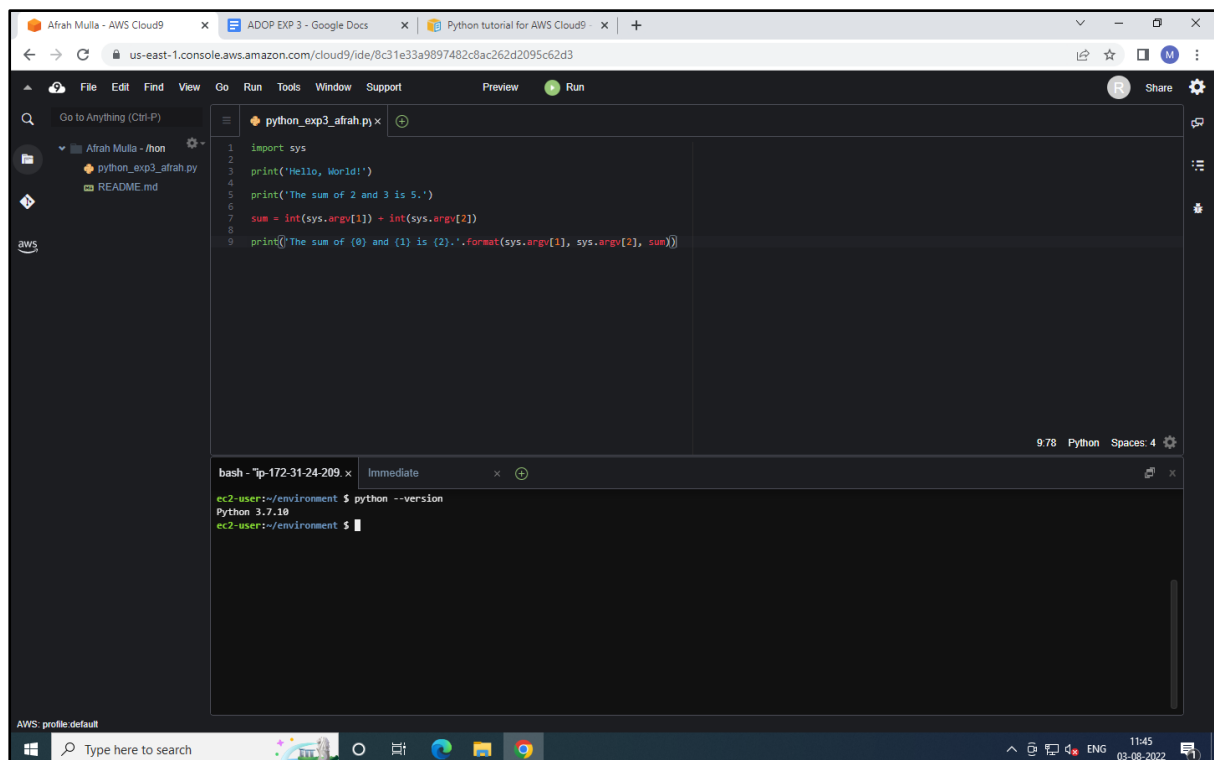

```
sudo - ip-172-31-24-209 x Immediate x
ec2-user:~/environment $ sudo yum -y update
Loaded plugins: extras_suggestions, langpacks, priorities, update-motd
253 packages excluded due to repository priority protections
No packages marked for update
ec2-user:~/environment $
```

```
bash - ip-172-31-24-209 x Immediate x
ec2-user:~/environment $ python --version
Python 3.7.10
ec2-user:~/environment $
```

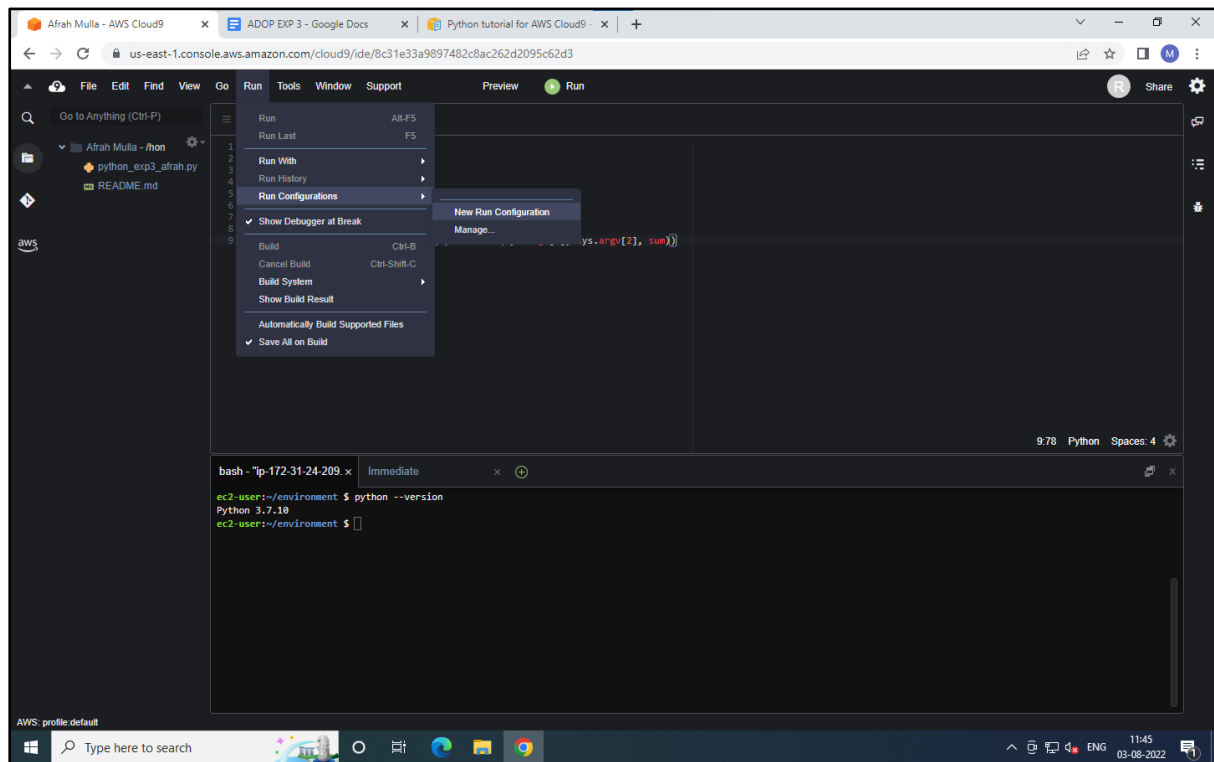

Step 2: Add code

In the AWS Cloud9 IDE, create a file with the python code and save the file with some name

Step 3: Run the code

- In AWS Cloud9 IDE, on the menu bar choose Run -> Run Configurations -> New Run Configuration.
- On the [New] - Stopped tab, enter filename.py 15 10 for Command
- Choose Run

Step 4: Install and configure the AWS SDK for Python (Boto3)

Install pip: `sudo python3.7 get-pip.py`

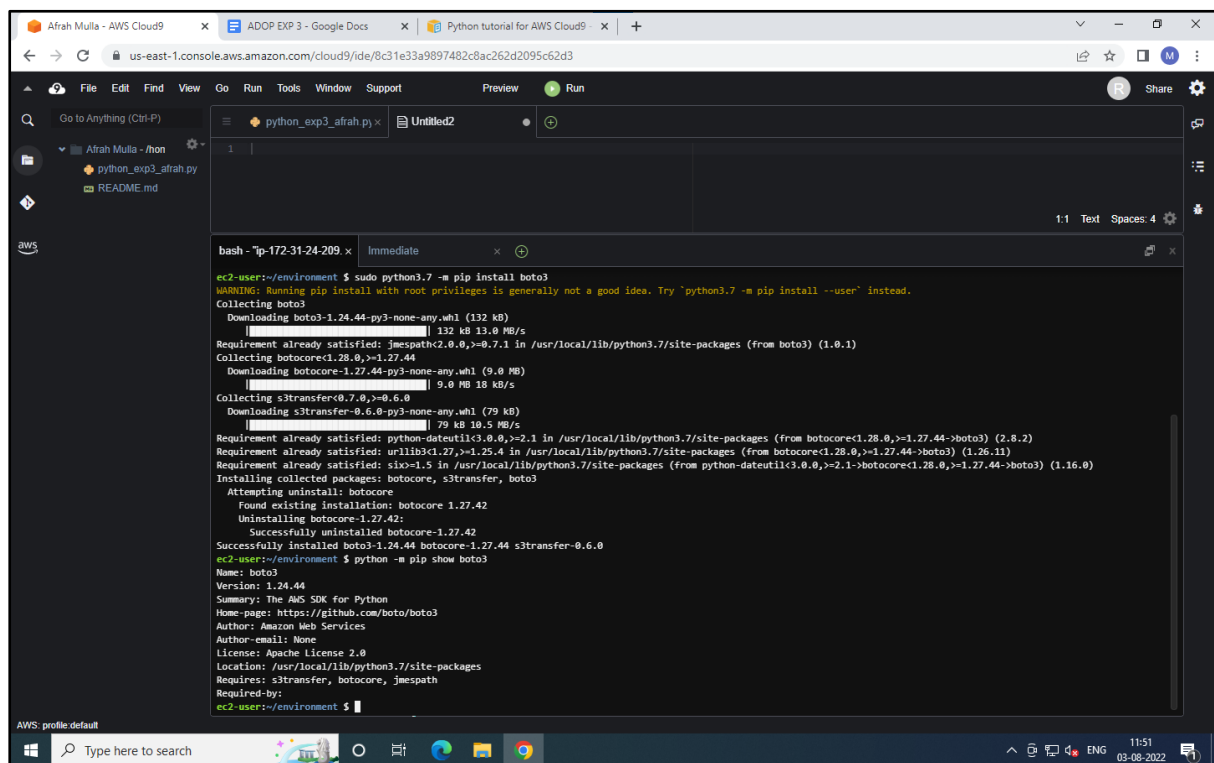

Install the AWS SDK for Python (Boto3) –

After you install pip, install the AWS SDK for Python (Boto3) by running the command

`sudo python36 -m pip install boto3`

Check the Boto3 version by running the following command

`python -m pip show boto3`

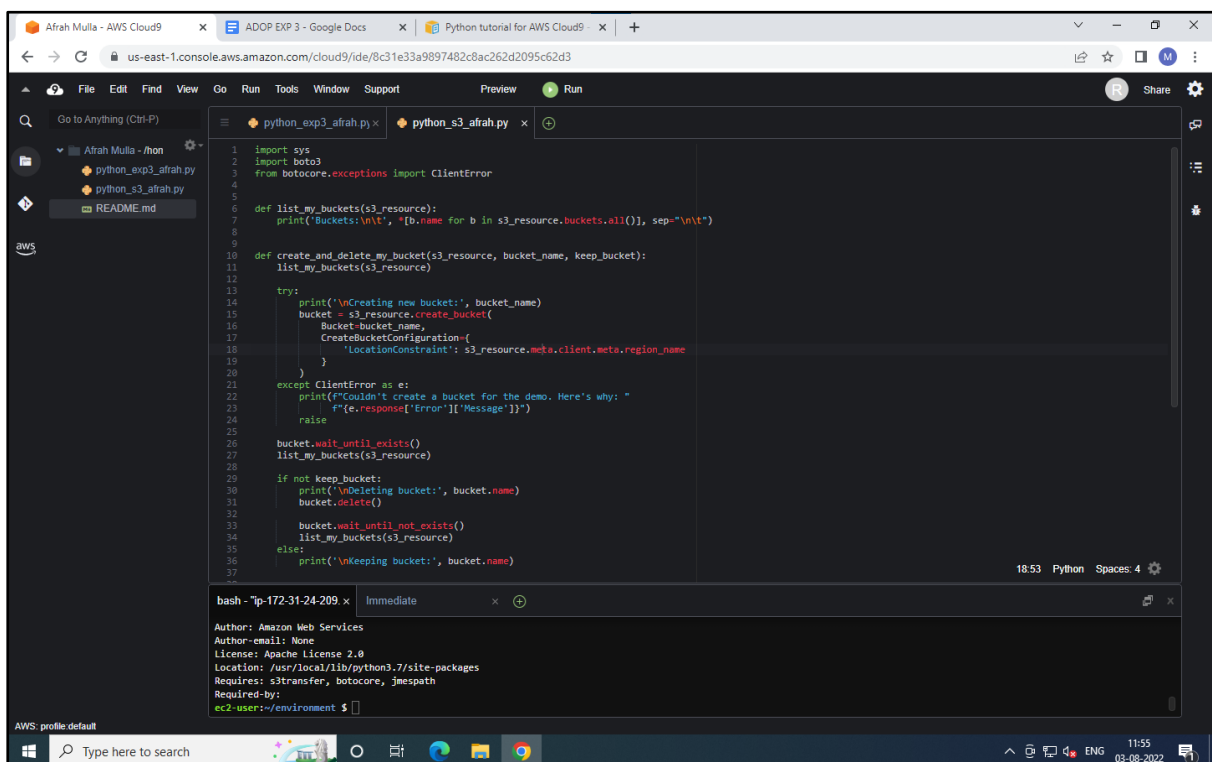

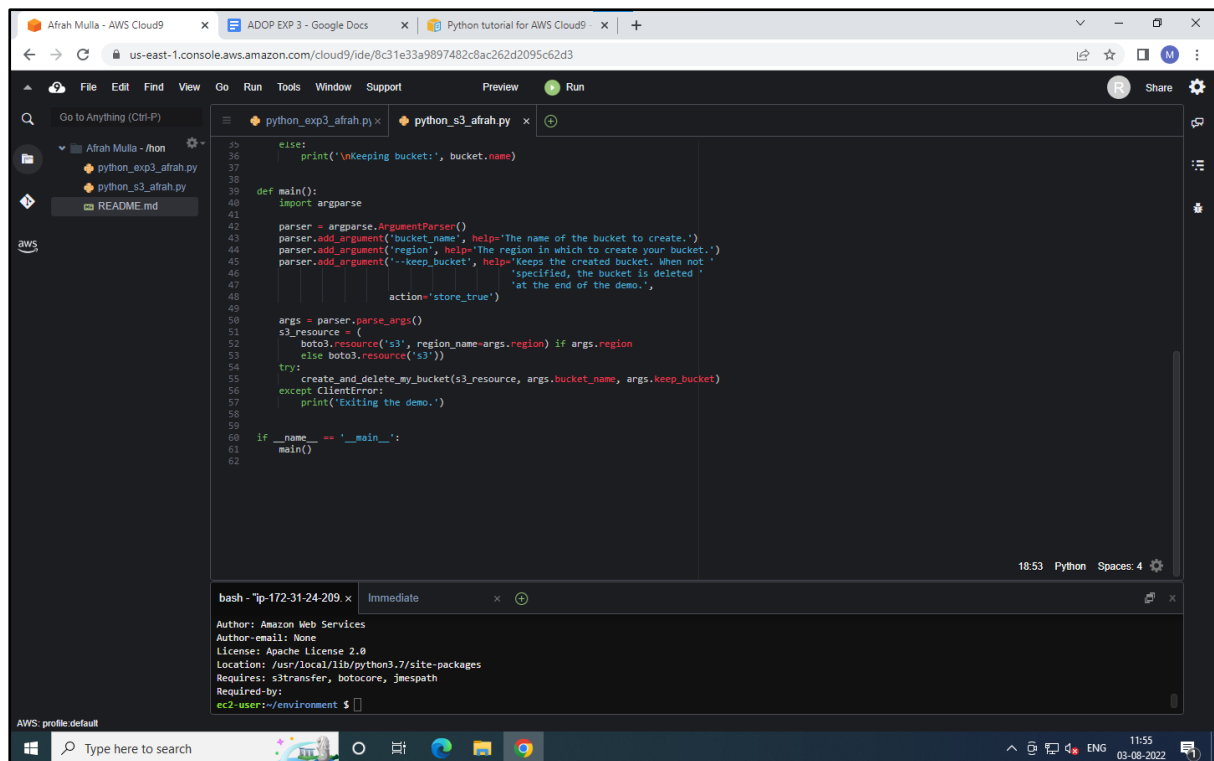

```
bash - "ip-172-31-24-209" x Immediate x
ec2-user:~/environment $ sudo python3.7 -m pip install boto3
WARNING: Running pip install with root privileges is generally not a good idea. Try 'python3.7 -m pip install --user' instead.
Collecting boto3

Installing collected packages: botocore, s3transfer, boto3
Attempting uninstall: botocore
  Found existing installation: botocore 1.27.42
  Uninstalling botocore-1.27.42:
    Successfully uninstalled botocore-1.27.42
Successfully installed boto3-1.24.44 botocore-1.27.44 s3transfer-0.6.0
ec2-user:~/environment $ python -m pip show boto3
Name: boto3
Version: 1.24.44
Summary: The AWS SDK for Python
Home-page: https://github.com/boto/boto3
Author: Amazon Web Services
Author-email: None
License: Apache License 2.0
Location: /usr/local/lib/python3.7/site-packages
Requires: s3transfer, botocore, jmespath
Required-by:
ec2-user:~/environment $
```

Step 5: Add AWS SDK code

Add code that uses Amazon S3 to create a bucket, list your available buckets, and optionally delete the bucket you just created

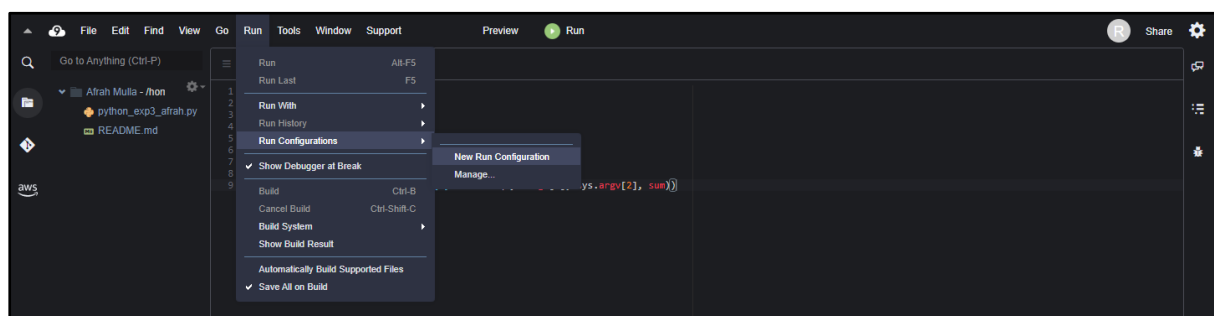

In the AWS Cloud9 IDE, create a file with the code content and save the file with some name

Step 6: Run the AWS SDK code

- On the menu bar choose Run -> Run Configurations -> New Run Configuration
- For Command, enter filename.py 'name of bucket' us-west-2, where us-west-2 is the ID of the AWS Region where your bucket is created. By default, your bucket is deleted before the script exits
- Choose Run

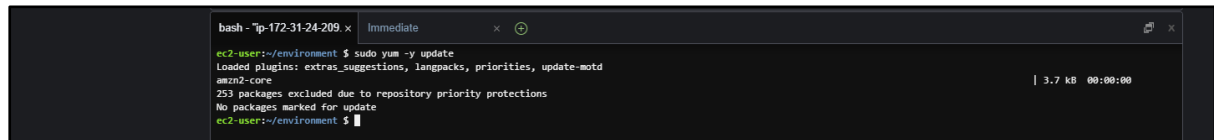

For Node.js

Step 1: Install required tools

Run the yum update for Amazon Linux to help ensure the latest security updates and bug fixes are installed: `sudo yum -y update`

Run this command to install Node.js: `nvm install v16.0.0`

Here, node.js is already installed

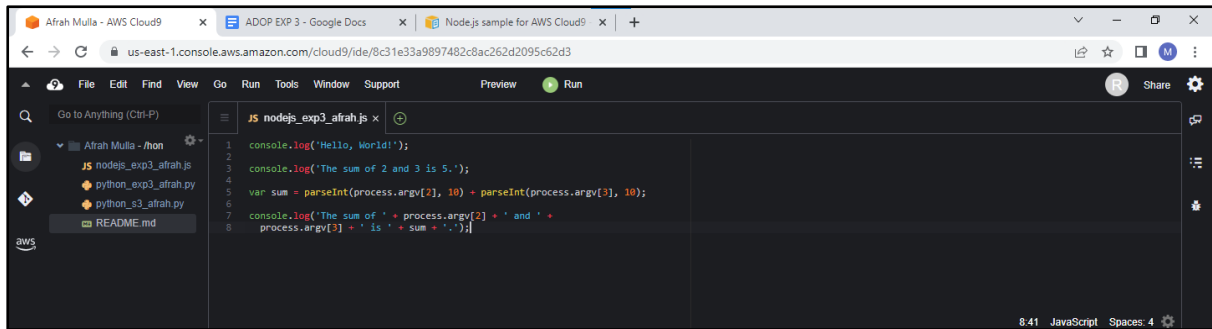

```
bash - Tp-172-31-24-209.x Immediate x
ec2-user:~/environment $ sudo yum -y update
Loaded plugins: extras_suggestions, langpacks, priorities, update-motd
amzn2-core
253 packages excluded due to repository priority protections
No packages marked for update
ec2-user:~/environment $
```

Step 2: Add code

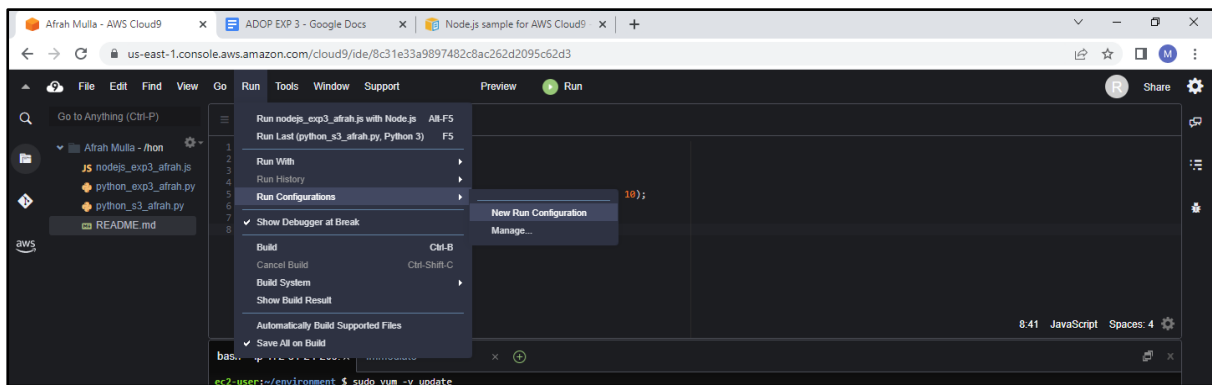

In the AWS Cloud9 IDE, create a file with the node.js code and save the file with some name

Step 3: Run the code

- In AWS Cloud9 IDE, on the menu bar choose Run -> Run Configurations -> New Run Configuration.
- On the [New] - Idle tab, enter filename.js 15 10 for Command
- Choose Run

Step 4: Install and configure the AWS SDK for JavaScript in Node.js

To install the AWS SDK for JavaScript(V2) in Node.js

Use npm to run the install command: `npm install aws-sdk`

```
bash -Tp-172-31-24-209.x Immediate x
ec2-user:~/environment $ npm install aws-sdk
npm WARN deprecated querystring@0.2.0: The querystring API is considered legacy. new code should use the URLSearchParams API instead.
added 58 packages, and audited 62 packages in 6s
38 packages are looking for funding
run 'npm fund' for details
found 0 vulnerabilities
ec2-user:~/environment $
```

Step 5: Add AWS SDK code

In this step, you add some more code, this time to interact with Amazon S3 to create a bucket, list your available buckets, and then delete the bucket you just created.

In the AWS Cloud9 IDE, create a file with the code content, and save the file with some name

Type here to search

12:12 03-08-2022

Step 6: Run the AWS SDK code

- Enable the code to call Amazon S3 operations asynchronously by using npm to run the install command: `npm install async`
- On the menu bar choose Run -> Run Configurations -> New Run Configuration
- For Command, type filename.js 'name of bucket' us-east-2, where us-east-2 is the ID of the AWS Region you want to create the bucket in
- Choose Run

Finally, close all terminals and delete the Cloud9 environment
